# Block and chain installation

Step-by-step installation for blocks and chains

- Place the blocks opposite the chain plates on each side between the floats.
- Thread the chain through the rods on the blocks and secure it with the galvanized quick links.
- Push the blocks into the water while holding the chain.
- Secure the chain into the chain plate by adjusting the tension with the chain links.

View block and chain installation video

1 **Chain Plate**
The plate secures the chain to the dock by locking the link at the proper tension. Some adjustments may need to be made to the tension by adjusting the links based on fluctuations in the water level.

2 **Quick Link**
By creating a loop with the chain to attach the blocks using the steel rods on each block, we secure the chain together with the shackle.
