

1. Identify your needs

- Dock a boat
- Create a living space
- Access the water
- Cross a wetland

Why is this important?

Depending on your needs, we have several possible configurations with the necessary installation materials for an easy and secure installation.

2. Determine your bank/shoreline

- Rocky
- Sandy
- Marshy
- Retaining wall

Why is this important?

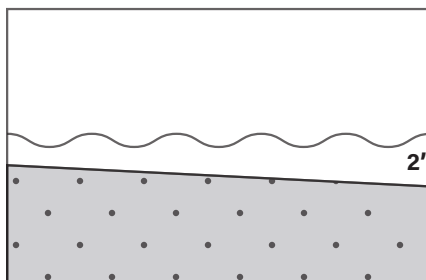

According to the type of bank, we have several initial anchoring solutions to meet your needs for safe access.

3. Determine your incline variation

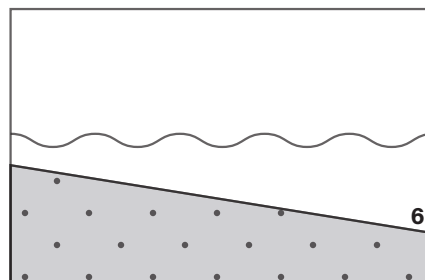

- Shallow
- Moderate
- Steep

Why is this important ?

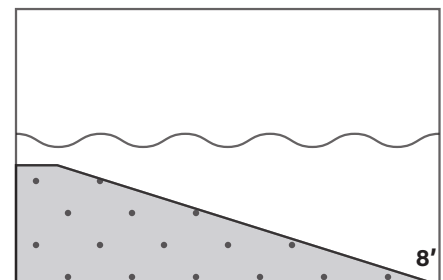

According to the variation, we will be able to guide you in the best choice of dock configuration.

Shallow

Moderate

Steep

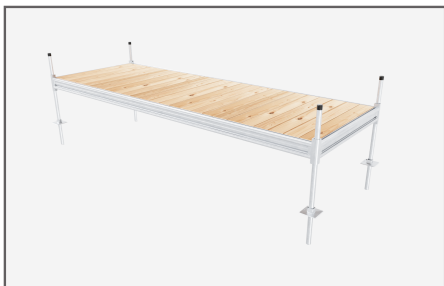

4. Determine your required distance

- Depth for motorized boats
- Depth for swimming
- Desired location

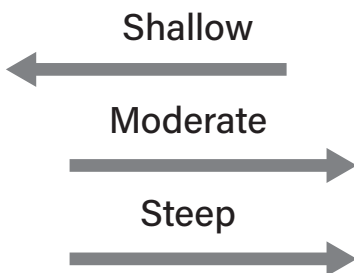

Why is this important ?

According to your needs, we have several possible configurations to achieve the desired distance.

1. Starting walkway - depending on access, shoreline and required distance

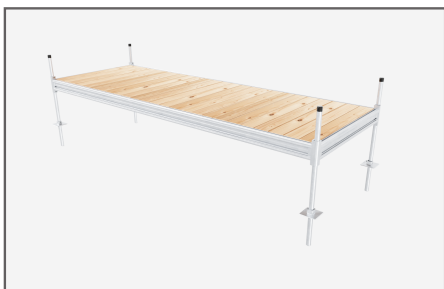

Standing dock : Starting on the bank with posts at all four corners of the walkway

Semi-floating dock : Start on the bank with two posts, followed by a float at the end of the walkway

2. Walkway - depending on your choice of starting walkway

Standing dock : Can be joined to another standing dock only

Semi-floating dock : Can be joined to a standing dock and serves as a transition between standing and floating docks

Floating dock : Can be joined to a semi-floating dock only

3. Platform - depending on your choice of walkway

Standing dock : Can be joined to another standing dock only

Floating dock : Can be joined to a semi-floating or floating walkway

PLEASE NOTE

This serves as a guide to help you clarify your options. We invite you to contact one of our representatives to discuss the best options based on your needs.
